Connected **Assistants** Home & Building

Everything at your fingertips

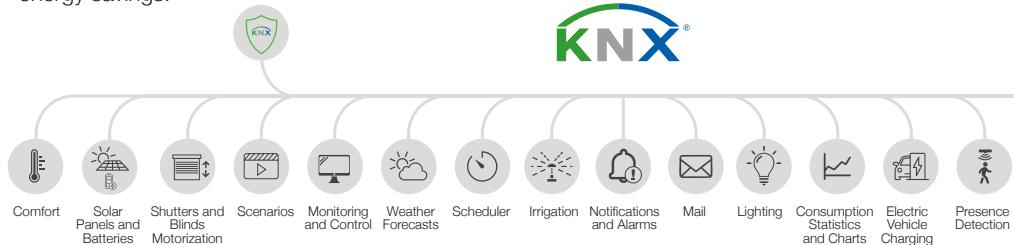

KNX®

Intelligent automation for your home and building

An advanced system that brings intelligent visualization to a new level, based on secure KNX technology and other standards to manage home and building automation, as well as batteries, solar panels, electric vehicles, audio, video intercom systems and much more.

Simplicity, control, efficiency

Manage every function with ease, automate anything, optimize consumption, and maximize energy savings.

XXTER
Home & Building Controller

One single app, all your devices

Control your home or building from smartphone, tablet or smartwatch: **everything is at your fingertips.**

Remote programming and management

Monitor and manage your installations securely via the cloud.

Multi-user /
Multi-installation

With Pairot, you can make the KNX system of any home compatible with Apple HomeKit, Amazon Alexa, and Google Assistant.

Pairot acts as a bridge, allowing you to control home components and check their status via an Apple device, Amazon Echo, or Google Home. For example, you can control lighting or climate with simple voice commands.

Because Pairot has bi-directional Matter support, you can connect it with any Matter compatible controller, and connect to other Matter accessories with Pairot, integrating them on the KNX bus.

In addition, Pairot is equipped with a configurable KNX tunneling interface, enabling remote management of the KNX system through the cloud.
